

Michael Starkey
*Project Manager and
Safety Coordinator*

Responsibilities

As Project Manager with the Specialties Group for Construction Systems Inc. (CSi), Michael is responsible for developing and preparing material takeoffs, pre-installation measurements, developing project budgets and material specifications, as well as project management. His attention to detail and accuracy helps ensure that clients' projects are completed on schedule and as specified.

Michael also serves as CSi's Safety Coordinator and oversees company safety programs to minimize risk of accidents and injuries. He provides safety program updates, issues new safety procedures, and helps foster a safety-first company culture.

Michael leads CSi's compliance with reporting and submission of current insurance documents, safety programs, and incident rates to ISNetwork and Avetta, two global contractor and supply chain firms that assist corporate buyers of commercial contracting services with the prequalification and risk management of contractors and suppliers.

Michael joined CSi in January 2017 as Logistics Assistant and helped support CSi's renovation and construction crews by scheduling deliveries and coordinating the movement of materials, equipment and tools. When Michael joined the Facilities project management team in mid-2017, his logistics experience provided a solid understanding of the intricacies of CSi's self-performance operations. In May 2018, Michael joined CSi's Specialties project management team.

Michael came to CSi with two years of construction management experience where he led two- to eight-person crews performing hotel renovation projects.
