

Zachary M. Poczik
Project Manager

Responsibilities

As estimator and project manager with the Facilities Group for Construction Systems Inc. (CSi), Zach is responsible for project development, budget pricing, and oversight through project completion. He works primarily in the renovation of medical, institutional and commercial facilities.

Zach has worked with the organization since 2005 while working toward a construction management and business administration degree. This involved time in the office, warehouse, trucks and hands on job site experience. Zach moved into the office permanently in January 2011. Zach believes his years of working in the operations provide a true perspective of the every day challenges of getting the job done.

Zach works primarily with Andy Poczik, his uncle, and CSi's executive vice president. Andy provides insight, with over 45 years of experience at CSi, affording Zach with the knowledge and knowhow to assess and carry out projects from start to finish. This exchange is ideal in that it will allow Zach to maintain methods and practices that have proved successful in ensuring quality workmanship and customer satisfaction regardless of a project's scope. This real-world perspective, along with his classroom work, puts Zach in an excellent position to help carry on Construction Systems' nearly 50-year tradition of partnering in building solutions.
